

Data Dictionary

data/raw/tax_rules.csv

Field	Description
jurisdiction	India, US-{state}, or EU-{country code}
tax_type	GST, TDS, Sales & Use Tax, or VAT
category	The specific rate band/section within that tax type - this is the join key the classification engine matches on
rate_pct	The rate, as a percentage
condition	Plain-language scope/threshold for when this rate applies
source	The citing authority/report
as_of_date	Effective date or date the figure was pulled
confidence	source_confirmed (checked against the cited primary source) or stable_fact_verify_before_filing (well-established but not re-confirmed live)

data/processed/synthetic_invoice_lines.csv

Field	Description
invoice_id, line_id	Synthetic identifiers
jurisdiction, category	Matches tax_rules.csv's join keys
counterparty_type	individual / company / foreign_nonresident
amount	Illustrative line amount
vendor_master_tax_code	The code "on file" - may be correct, blank, or stale (1 in 3 lines)
correct_tax_code	The code the engine independently derives as correct
note	Plain-language scenario description

data/final/exception_queue.csv

All lines where status != OK - the working queue a tax-ops analyst would action, with a reason field stating exactly why each line was flagged.

outputs/tables/reconciliation_summary.csv

Exception rate by jurisdiction - the validation gate described in the Recommendation Memo.
